

Danish Day

17 OCTOBER 2018

Seminar Room B - Inside Hall A2 (Ground Floor)

🕒 10:30~11:15

DANBRED

**Simple steps to increase
litter size**

Mr. Niels Geertsen

*Technical Sales Manager,
Danbred*

▶**Synopsis:**

Increasing the litter size in one of the easiest ways to maximize the productivity of your sow herd. The genetic potential of a modern high prolific sow is most often a lot higher than what we manage to get out of them in our farms. Through this technical seminar we go through some of the simple action points that can help you to unlock more of your sows genetic potential.

🕒 11:15~12:00

DANISH FARM
Concept®

**Danish Farm Concept - How to
wean 35 PSY in Asia and lower
your production costs**

Mr. Henrik Nielsen

*Area Sales Manager,
Danish Farm Concept*

▶**Synopsis:**

Danish Farm Concept represent the most efficient production concept in the world. Danish pig production is world famous for its high efficiency and low production costs. In Denmark there are 1 mio. sows producing in average 32 PSY. The top farmers in Denmark are now weaning +40 PSY. The presentation will give the audience details about the most modern design, biosecurity standards, technical solutions and management methods in modern Danish farm solutions in Denmark and abroad.

 13:30~14:30

Ventilation for pigs and low energy costs

Mr. Joergen Moeller Andersen

*Area Sales Manager,
SKOV A/S*

► **Synopsis:**

BlueFan combines a minimum power consumption with high airflow ratio. BlueFan operated with Dynamic MultiStep uses much less power to exhaust air from livestock houses and provides you the most pressure-stable and energy-efficient solution on the market. BlueFan is designed with an extremely airtight motorized shutter system and very silent when in operation. The fan is made of thermoplastics and stainless steel, so it stands the harsh environment in a livestock house. The fan has a direct drive meaning that the wings are directly driven and no adjustment and maintenance of belts is needed.

 14:30~15:00

Feeding of high productive sows in hot environmental conditions

Mr. Oleksandr Myakushko

*Nutritionist and Management Supporter,
Vilomix*

► **Synopsis:**

Attend our presentation to listen more detail.

 15:00~15:45

Situation of piglet white antibiotic free, and how to help them by our HP 300 product by reduce stress

Dr. Elke von Heimendahl

*Global Segment Manager,
Hamlet Protein A/S*

► **Synopsis:**

Studies show that many instances of diarrhoea in young animals are caused by nutritional shortcomings. This could be prevented by better selection and composition of the ingredients in the diet – with no use of antibiotics at all. By choosing high quality feed ingredients with a minimal content of anti-nutritional factors, producers can ensure optimum nutrient digestibility and minimal damage to the gut environment. Numerous studies have already shown the benefits to young animal health, development and growth.
